Professional Summary

DevOps Engineer with 6+ years of experience in designing, building, and operating **cloud-native platforms** across **AWS** and **Azure**. Proven track record of owning **Kubernetes** and **OpenShift**-based infrastructure, **Infrastructure as Code**, and **CI/CD automation** with measurable impact on cost **optimization, reliability, and delivery velocity**. Brings a strong **backend development** foundation (.NET, Web APIs, microservices), enabling end-to-end system ownership from application design to production-grade infrastructure and observability.

Highlighted Skills

- **Cloud & Infrastructure:** AWS, Microsoft Azure, EKS, AKS, Terraform, ARM
- **Containers & Orchestration:** OpenShift, Kubernetes, Helm, Docker
- **CI/CD & Automation:** GitHub Actions
- **Monitoring & Observability:** Prometheus, Grafana, OpenSearch, Logstash, Azure Monitor, AWS CloudWatch
- **Networking:** AWS VPC, Azure VNet, Hub-Spoke, Transit Gateway, Application Gateway
- **Security:** IAM, Azure Key Vault, Managed Identity, Service Principals
- **Backend Engineering:** C#, ASP.NET Core, Web API, EF Core, LINQ, Microservices
- **Databases & Storage:** PostgreSQL, SQL Server, AWS S3, Azure Blob Storage, Crunchy Operator
- **Practices:** Infrastructure Optimization, Platform Reliability, Code Quality, Agile

Work Experience

- **Siemens Technology and Services** (*Senior Developer - Apr 2023 to Present*)
 - Owned the design and operation of cloud infrastructure across AWS using Terraform, provisioning production-grade VPCs, EKS clusters, RDS, and Transit Gateways to support scalable enterprise workloads.
 - Led OpenShift and Kubernetes cost optimization initiatives, reducing infrastructure spend by 35–40% through right-sizing, workload tuning, and cluster-level optimizations without impacting availability.
 - Built and standardized Helm-based deployment strategies, enabling consistent, repeatable releases across environments and reducing manual deployment errors.
 - Designed and operated a large-scale SonarQube platform (5,000+ projects, ~1TB database), directly improving code quality governance across multiple engineering teams.
 - Identified database growth bottlenecks and implemented automated maintenance workflows, reducing SonarQube database size by ~40% and improving platform stability.
 - Acted as a bridge between application teams and platform infrastructure, applying backend engineering knowledge to design resilient, developer-friendly cloud environments.

Impact: Lowered operational costs, improved deployment reliability, and strengthened enterprise-wide code quality enforcement.

Tech: AWS, Terraform, Kubernetes, OpenShift, Helm, Docker, SonarQube, PostgreSQL

- **CitiusTech Healthcare** (*Software Engineer - Dec 2021 to Mar 2023*)
 - Designed and developed, high-performance REST APIs using ASP.NET Core, EF Core, JWT, and LINQ, improving interoperability across healthcare systems.
 - Built app: Practice Management System using .NET core Web API, Angular and Docker, supporting core workflows such as patient management, doctor scheduling, reporting, and administration.
 - Implemented background job processing using Hangfire, enabling reliable event notifications and asynchronous task execution for business-critical workflows.

- Containerized backend services using Docker and Docker Compose, laying the foundation for future cloud-native and Kubernetes-based deployments.
- Collaborated closely with QA and product teams to improve API reliability and reduce regression issues through structured testing and cleaner service boundaries.

Impact: Improved system scalability, automation, and reliability for healthcare operations with real-world compliance and performance constraints.

Tech: C#, ASP.NET Core, Web API, EF Core, SQL Server, Hangfire, Docker, Angular

- **Sagitec Solutions** (*Jr. Software Engineer - Jun 2019 to Dec 2021*)

- Contributed to the Ohio Unemployment Insurance System, a mission-critical platform supporting unemployment claims and payments for U.S. state agencies.
- Developed dashboards and reporting modules for wages, benefits, and eligibility checks used by thousands of claimants and administrators.
- Optimized SQL queries and LINQ-based data access to support high-volume transactional workloads with strict performance requirements.
- Progressed from Intern to Full-Time Engineer, demonstrating strong ownership and consistent delivery on a large-scale government system.

Impact: Helped maintain reliability and accuracy of a public-sector system handling high user volumes and financial transactions.

Tech: C#, .NET Framework, MVC, LINQ, SQL Server, Git

Education

B.Tech - Computer Science and Engineering (2016-2020)

GLA University, Mathura

Specialization: **Cloud Computing and Virtualization**
